

Lencolo 8921W Anti-sagging Additive

Description

Lencolo 8921W is a specially modified nanopolymer solution for use as a liquid rheology agent in aqueous coatings. The surface has a slight positive charge and is excellent for anti-sinking and alignment of aqueous metallic pigments.

Technical data

Component	Specially Modified Nanopolymer Solution
Appearance	Water white transparent liquid
Active ingredient	15%
Solvents	Water

Performance

Improve the arrangement effect of metal pigments such as silver paste, and the metallic feeling of water-based paint;

Good anti-sinking effect and anti-sag effect;

Applications

Various water-based paint systems, water-based pigment pastes, especially water-based silver paints, etc.

Usage

Addition amount: 8-15%

Storage

To prevent the product from polymerization and gelling, please keep it sealed and away from heat and light. Recommended storage temperature is not higher than 30°C. Unused products must be sealed and stored in a timely manner and cannot be stored in the open. Safe storage time is 6 months at room temperature(25°C) and under ventilation. 25KG/barrel

Tips: Lencolo 8921W is mainly used in various water-based systems to improve the arrangement of silver powder and prevent precipitation and sagging.
