

Lencolo 8921W Anti-sagging / Silvering Additive

Description

Lencolo 8921W is a specially modified nano-polymer solution used as a liquid rheology additive for water-based coatings. It carries a slight positive surface charge, providing excellent anti-settling performance and promoting proper orientation of water-based metallic pigments.

Technical Data

Composition	Specially Modified Nano-polymer Solution
Appearance	Clear, water-white liquid
Active Content	15%
Solvent	Water

Product Features

Enhances the orientation of metallic pigments such as silver paste, improving the metallic appearance of water-based coatings.

Provides excellent anti-settling and anti-sagging performance.

Zero VOC.

Applications

Applicable to various water-based coating systems and water-based pigment/filler concentrates, especially medium-viscosity water-based silver coatings.

Recommended Usage

Addition amount: 8-15%

Storage Conditions

To prevent the product from polymerization and gelling, please keep it sealed and away from heat and light. Recommended storage temperature is not higher than 30°C. Unused products must be sealed and stored in a timely manner and cannot be stored in the open. Safe storage time is 6 months at room temperature(25°C) and under ventilation. 25KG/barrel

Tips: Lencolo 8921W is primarily used in various water-based systems to enhance the orientation of silver pigments and to prevent settling and sagging.
