

Lencolo 8945 Anti-settling Agent for Rubber Paint

Description

Lencolo 8945 is a solvent-based liquid anti-settling agent that is easy to use. Its special structure enables the matte powder to play a good anti-settling role in the product system. Especially in the two-component rubber paint system, it has a good anti-settling effect. At the same time, the additive has a good substrate wetting effect.

Technical data

Component	High molecular polymer
Appearance	Transparent liquid
Solid content	81%
Density (g/cm ³ , 25°C)	1.04

Performance

It helps matt powder to be added into the coating system, which can reduce and prevent the precipitation of matt powder in the coating, increase and stabilize the thixotropy of matt powder, and prevent the precipitation of matt powder. It is especially suitable for the anti-settling of matt powder in rubber paint and elastic paint. A small amount of addition can achieve the anti-settling

Applications

It is particularly suitable for the anti-settling of matte powder in rubber paint and elastic paint, and is also suitable for PU and UV coating systems.

Usage

0.1-0.3% of the total amount of coating

Precautions

Keep away from fire and high temperature and keep sealed.

Store at 0-40°C.

Please be careful when handling solvent system and avoid contact with human body.

For more detailed information, please refer to MSDS.

Precautions

25KG/barrel

Tips: Lencolo 8945 has a very good anti-settling effect on matte powder in rubber paint system and will not form hard sediments.
